Ideation Phase

Empathy Map Canvas

Date	02 October 2026
Team ID	SWTID-2026-5170
Project Name	Script-Controlled ACL – Restrict Record Access Based on Custom Script
Maximum Marks	4 Marks

User in focus: ServiceNow administrator and the users who work with confidential records.

SAYS • "Why can everyone see this record?" • "I cannot edit my own entry." • "Who changed this data?"	**THINKS** • Sensitive data must stay protected. • Rules should depend on the record, not only the role. • Access control should be easy to audit.
DOES • Assigns roles to users. • Creates and tests ACLs. • Impersonates users to check access.	**FEELS** • Worried about leaks of confidential data. • Frustrated by broad role-based access. • Confident when only the right users have access.

PAINS	GAINS
• Unauthorised users can view or edit records • Role-only ACLs are too coarse • Hard to explain why access was granted	• Record-level control using a script • Consistent Read, Create, Write and Delete rules • Easy to test with impersonation
