Project Design Phase

Problem - Solution Fit

Date	02 October 2026
Team ID	SWTID-2026-5170
Project Name	Script-Controlled ACL – Restrict Record Access Based on Custom Script
Maximum Marks	2 Marks

Problem-Solution Fit means finding a real customer problem and making sure the proposed solution addresses it directly. Here the problem is uncontrolled access to records, and the solution is script-controlled ACLs.

Canvas block	Details
Customer segment	ServiceNow administrators, data owners and the users who work with confidential records.
Jobs to be done / problems	Keep sensitive records private; let owners work on their own data; stop accidental edits and deletions.
Triggers	A data leak, an audit finding or a request to restrict records by owner or status.
Emotions before / after	Before: worried and unsure. After: confident that access is controlled.
Available solutions	Role-only ACLs, condition ACLs, UI policies. They cannot combine role, ownership and field values in one rule.
Our solution	Script-controlled ACLs for Read, Create, Write and Delete using field values and user conditions.
Channels	ServiceNow lists, forms and REST access, all enforced by the same server-side ACLs.
Behaviour	Admins configure rules once; the platform enforces them every time a record is accessed.
