Project Development Phase

User Acceptance Testing (UAT)

Date	02 October 2026
Team ID	SWTID-2026-5170
Project Name	Script-Controlled ACL – Restrict Record Access Based on Custom Script
Maximum Marks	10 Marks

Project overview

Project name	Script-Controlled ACL – Restrict Record Access Based on Custom Script
Description	Restricts access to records in a ServiceNow table using ACL scripts that check field values and user conditions before granting Read, Create, Write or Delete access.
Project version	Version 1.0
Testing period	[Start date] to [End date]

Testing scope

- Creation of users and roles
- Creation of the Confidential Record table
- READ ACL: admin, owner, standard user and no-role user
- CREATE ACL: authorised and unauthorised users
- WRITE ACL: owner, non-owner, closed records
- DELETE ACL: admin and non-admin users

Testing environment

Application	ServiceNow Personal Developer Instance
Module	System Security > Access Control (ACL); User Administration
Method	Impersonate User from the admin account
Credentials	Authorised project team accounts

Test cases

Test case	Scenario	Steps	Expected result	Actual	Pass / Fail
TC-001	Admin has full access	Impersonate admin; read, edit and delete a record.	All operations allowed.	*Update after testing*	[ ]
TC-002	Owner reads/edits own record	Impersonate owner; open and edit own record.	Allowed until the record is Closed.	*Update after testing*	[ ]
TC-003	Confidential record hidden	Impersonate standard user; open the list.	Others' confidential records are not listed.	*Update after testing*	[ ]
TC-004	Standard user cannot edit/delete	Impersonate standard user; edit and delete a visible record.	Both actions blocked.	*Update after testing*	[ ]
TC-005	No-role user blocked	Impersonate no-role user; open list and New form.	No access.	*Update after testing*	[ ]
